#### **DETAILED ACTION**

### **Drawings**

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

# Specification

- 2. The abstract of the disclosure is objected to because to it does not provide an adequate disclose of the what the applicant regards as the invention. Correction is required. See MPEP § 608.01(b).
- 3. The applicant is reminded that the new abstract must be provided on a separate sheet of paper and must contain no more than 150 words (in accord with new Rule 1.72).

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Art Unit: 2851

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 - 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanada (US 5,843,527) in view of Morimoto (US 5,898,588 and Venkatesh et al. (US 6,074,443).

Sanada has the basic processing apparatus. Morimoto teaches interrupting the wafer manufacturing process if there is a delay or error in one of the processing station. Venkatesh et al. teaches optimizing the control of the wafer manufacturing processing apparatus by sending the wafer into another available station if there is a delay or error in a station. One of ordinary skill in the art would use the software instruction and hardware instruction to control the process of Sanada in order to increase throughput and control malfunctions in all stages of the operation.

#### Response Data

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Rutledge whose telephone number is (703) 308-1697. The examiner can normally be reached on Mon - Thurs, 6:00 AM - 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Russell Adams can be reached on (703) 308-2847. The fax phone numbers for the organization where this application or proceeding is assigned are (703).

Application/Control Number: 09/583,629

Art Unit: 2851

305-3431 for regular communications and (703) 308-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1782.
